

# IWeb Immunization Intelligence System

**iWeb**

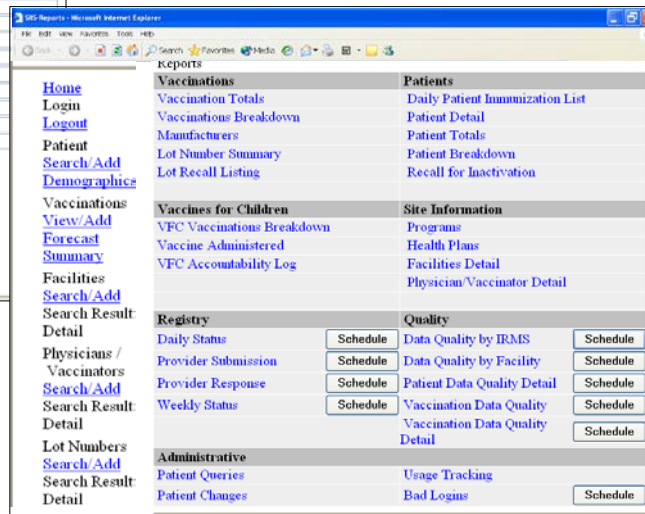

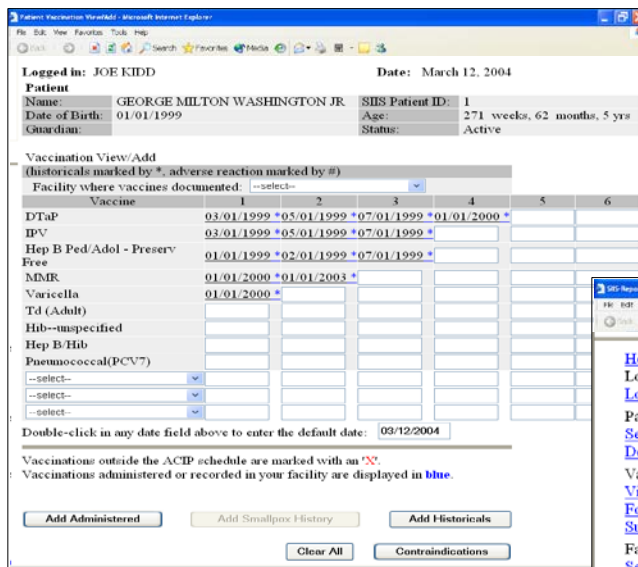

STC began the development of IWeb, our immunization intelligence system (IIS), in 1993, a suite of tools that has grown into the most cost effective, feature-rich, and efficient immunization registry in the U.S.

The IWeb product line, along with various component modules, is installed in twenty percent of state health departments.

STC's IWeb is a fully functional, easy-to-use system that can be configured and customized to support statewide, regional, and/or individual physician office immunization registry needs. The product line supports current CDC NCIRD and PHIN initiatives and is available through STC's GSA schedule.

IWeb immunization intelligence system features:

- User-friendly interface.
- Forecasting that includes ACIP-recommended and accelerated schedules.
- Reminder/Recall with labels, postcards, letters, emailing, and auto-dialer text files.
- Probabilistic and deterministic de-duplication with automated and manual record merging.
- Over 500 canned reports and an optional DataMart for large reports and ad hoc queries.
- Advanced inventory distribution and management tools, including an interface with VTrckS and VACMAN.
- Electronic data exchange capabilities including HL7 v2.5.1 support for meaningful use and interoperability efforts.
- Barcoding tools for rapid data entry of patients and vaccinations.
- Numerous add-modules to fit any immunization data collection or reporting requirement.
